

# Horse Box

## Shelter from the elements

A Tru-Bilt Horse Box may be simplistic but it offers your horses much needed shelter from the elements. A Tru-Bilt Horse Box is manufactured for quick and easy assembly. The materials used for our Tru-Bilt Horse Boxes are durable, strong and long lasting and will provide protection from the harsh Australian climate. The main frame is manufactured from 100mm x 50mm x 2mm Rectangular Hollow Section (RHS) pre-galvanized Australian steel. We use 12mm thick connecting plates that are welded to the main frame. All connections are bolted

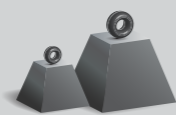

together with 12mm Hi-tensile bolts for superior strength.

The internal sub frame C100 girts and roof purlins are securely held in place with Hi-tensile bolts. We also have approved independent engineering to ensure your Tru-Bilt Horse Box will stand the test of time.

Minimal work is required during construction as almost all of the parts for your Tru-Bilt Horse Box have been pre-drilled or pre-cut to fit. If desired, internal kick boards and plinth boards can also be easily fitted to further protect your horses.

Simplistic design built to last

Easy construction with superior strength
